A
What the probes predict: one unit's tuning
linear velocity model
data (mean ± SEM)
firing rate (Hz)
preferred direction
movement direction (deg)
B
Unit properties read from the embeddings
firing rate
tuning strength
session-mean oracle
shuffled targets (95th pct)
held-out units (95% CI)
probe R² (held-out electrodes)
C
Preferred direction, 8,615 held-out units
predicted from embedding (deg)
true preferred direction (deg)
D
Same electrode, more similar embeddings
cosine similarity, same − different electrode
monkey M
monkey C
channel labels shuffled
days between the two sessions
